

CUSTOMER CASE STUDY

"The ideal solution for us had to accelerate application performance, be reliable, scalable and minimize IT resource utilization while being flexible enough to meet the changing business needs and demands of our organization. Aryaka's resilient network met all of these criteria bar none. The MyAryaka web-based portal gives us the fine-grained network and application visibility and control needed to ensure we are maximizing WAN and application performance."

Mark Jones, IT Manager

Anite

About

Anite is a global leader in wireless network testing technology. It provides mobile device, infrastructure and network testing systems to the international wireless market. The company is UK headquartered and has offices in 14 countries throughout Europe, the Americas, Asia and the Middle East.

Business Problem

Anite hosts all of its business applications at its corporate datacenter in the UK. It was critical for the company to improve collaboration across its global offices, especially in rapidly expanding markets in Asia and North America. Public Internet was not good enough because of high latency, packet loss, inconsistent application performance and painfully slow large file transfers.

Benefits with Aryaka

- Up to 76% CIFS data reduction
- 92% peak compression rate
- Reduced and stable core latency between locations
